The standard duration of study for full-time students is three and a half years (seven semesters).
(2) A total of 210 credit points are awarded for successful completion of the programme.
(3) The programme consists of a theoretical and application-oriented core curriculum and a specialisation phase. Students may choose different areas of specialisation by selecting from a range of compulsory-elective modules. The final three semesters of the programme are devoted to a practice-oriented specialisation. The programme concludes with the Bachelor's thesis, to be completed in the seventh semester.

The language of instruction and examination is English.

Single Degree: HAW Degree: Upon successful completion of the programme, the University of Applied Sciences awards the academic degree 'Bachelor of Science (B.Sc.)'

In the fifth semester, students undertake the 'Integration Subjects' module. This module is designed to help students acquire interdisciplinary skills and methods, as well as to explore knowledge and methods from areas situated at the boundaries or interfaces of the programme's curriculum. In terms of content, the module covers both the development of key competences (soft skills) and an in-depth examination of subject-specific topics. By choosing these subjects from the range of courses offered by the VGU and/or HAW Hamburg, students broaden their horizons in line with their own interests. The integration subjects are announced to students via notice boards or online. Students must successfully complete a total of six credit points across at least two integration subjects. Any credit points earned in excess of this will be forfeited.

In the sixth semester, students must successfully complete five modules, each worth five credit points, from the range of compulsory-election modules on offer. Students have the option of selecting all modules from a single specialisation or from different specialisations. Alternatively, examination and coursework may be undertaken in up to two other, academically relevant compulsory-choice modules from the Bachelor's programme offered by HAW Hamburg or another higher education institution. In this case, an application for the recognition of the examination and coursework to be undertaken in these modules must be submitted to the Chair of the Examination Board at the start of the course. If examination and coursework have been completed in more than five modules, the student must, no later than upon submission of the Bachelor's thesis, specify five compulsory-elective modules to be included in the calculation of the overall mark. Up to three surplus modules may, upon application, be included on the transcript as additional modules; however, they will not be included in the calculation of the overall mark in accordance with Section 29. The relevant specialisation will only be listed on the transcript if at least four modules from that specialisation have been successfully completed.

Successful completion of modules M1 to M12 is a prerequisite for participation in courses and admission to examinations for the third-year modules (M 25 to M 44).

In the seventh semester, the degree programme includes a practical module worth 15 credit points, comprising a 14-week industrial placement in a role relevant to the engineering

profession and an accompanying course. (2) The practical module may only be commenced once modules M1 to M12 of the first year of study have been successfully completed. (3) The practical module is completed by means of an academic assignment in the form of a presentation. Students must provide evidence of the successful completion of the practical semester to the person responsible for the practical module.

Attendance is compulsory for the following types of course: 1. Seminar (S), 2. Laboratory course (Prak) and 3. Exercise (Üb), as regular active interaction between students and lecturers, joint reflection and the practical application of research and presentation methods are essential for achieving the learning outcomes. (3) The attendance requirement is met if the student has attended at least 80 per cent of the weekly semester hours for the respective course as specified in the module table in accordance with Section 7(5). (4) Courses are generally held in person. In addition, courses may be delivered with digital support using the video conferencing systems, learning management systems, learning platforms and other technical aids provided by the university.

Registration for and withdrawal from examinations
Participation in an examination requires students to register for it. Registration also constitutes
an application for admission to the examination. Registration for an examination becomes binding
once the withdrawal deadline for that examination has passed. Students may not sit the examination if they have not registered or have not been admitted.

Bachelor Thesis

The Bachelor's thesis is a written piece of work. In addition to the written Bachelor's thesis, a final colloquium is a compulsory component of module M46 'Bachelor's Thesis with Final Colloquium'. The final colloquium consists of an oral presentation followed by a discussion of the contents of the Bachelor's thesis. It must take place no later than ten weeks after the submission of the written Bachelor's thesis.

Admission to the Bachelor's thesis may be applied for once at least 180 credit points have been earned.

The Bachelor's thesis must be written in English

The final thesis is assessed by two examiners (first and second examiners). The first examiner is responsible for supervising the final thesis. First examiners may only be university lecturers at
HAW Hamburg or the VGU who are authorised to conduct examinations

The Bachelor's thesis must be submitted in writing, in a single copy, to the relevant office by the deadline. In addition, the Bachelor's thesis must be submitted in electronic form. The student must certify that the electronic version submitted corresponds to the written copy. The date of submission must be recorded. A written

declaration must be submitted together with the Bachelor's thesis, in which the student affirms on oath that the thesis was written independently without external assistance and that only the sources and resources cited were used.

Upon application by the student submitted before the deadline expires, the chair of the The examination board may, where there is good cause, extend the completion period by a maximum of six weeks.

The Bachelor's thesis shall be marked without delay, and at the latest within eight weeks of its submission.

Twelve credit points are awarded for the written component of module M46 'Bachelor's Thesis with Final Colloquium' and three credit points for the subsequent final colloquium.

If the Bachelor's thesis with the final colloquium is graded 'unsatisfactory' (5.0) in the overall assessment, it may be retaken once in accordance with Section 20(4). Only in justified exceptional cases may the Examination Board grant a second opportunity to retake the module. The resit must be undertaken with a new topic. The new topic for the thesis shall be issued within a reasonable period, usually within three months of the assessment of the thesis marked 'unsatisfactory'

Retaking Examinations
(1) Passed examinations or coursework, or a passed Bachelor's thesis including the associated final
colloquium, may not be retaken.
(2) Any examination or course component that has not been passed may be retaken three times,
giving a total of four attempts. If all opportunities to retake the examination or course component
have been exhausted without success, the examination or course component in question is deemed to have been definitively failed.
(3) At least one examination opportunity is offered for each examination or course module during
the current semester. It must be ensured that, as a rule, each examination or course module can
be retaken by the end of the following academic year at the latest. Students should take the next
available examination date.
(4) A failed Bachelor's thesis, including the associated final colloquium, may be retaken only once..

§ 21 Absence and Withdrawal
(1) If, after registering for an examination, a student misses an examination date without good
cause, withdraws from an examination once it has begun, or fails to complete an examination or
academic task within the stipulated—or, where applicable, extended—time limit, the examination

result shall be graded as ‘unsatisfactory’ (5.0) or the academic task as ‘failed’.
(2) The reason given for the absence or withdrawal must be notified to the chair of the examination
board via the relevant office without delay, in writing or electronically, and must be substantiated.
In the event of illness, a valid medical certificate must be submitted

(3) If the reason given for the absence or withdrawal is accepted, the examination attempt shall be
deemed not to have taken place
