Examination and Study Regulations for the Bachelor's degree programme in Mechatronics (B.Sc.) of Hamburg University of Applied Sciences (Hochschule für Angewandte Wissenschaften Hamburg) at the Vietnamese-German University (VGU)

Dated 17 September 2026

The Executive Board of the Hamburg University of Applied Sciences resolved on 23 September 2026, pursuant to Section 108(1), third sentence, of the Hamburg Higher Education Act (HmbHG) in the version dated 18 July 2001 (HmbGVBl. p. 171), as last amended on 19 February 2025 (HmbGVBl. p. 241), the "Examination and Study Regulations for the Bachelor's degree programme in Mechatronics (B.Sc.) of the Hamburg University of Applied Sciences (Hamburg University of Applied Sciences) at the Vietnamese-German University (VGU)", as adopted on 17 September 2026 by the Faculty Council for the Faculty of Aviation and Automotive Systems pursuant to Section 91(2)(1) of the Hamburg Higher Education Act (HmbHG), in the version set out below.

Table of Contents:

§ 1 Scope
§ 2 Objectives of the degree programme
§ 3 Standard duration of study, total number of credit points and structure of the degree programme
§ 4 Language of instruction and examination
§ 5 Academic degree
§ 6 Subject-specific academic advice
§ 7 Modules and credit points
§ 8 Practical module (industrial placement)

§ 26 Appeal proceedings
§ 27 Final failure
§ 28 Passing the Bachelor's examination
§ 29 Overall mark for the Bachelor's examination
§ 30 Certificate, conferral of the academic degree, Diploma Supplement
§ 31 Invalidity of the examination
§ 32 Entry into force

§ 1 Scope

These Examination and Study Regulations govern the examination requirements and procedures for the Bachelor's degree programme in Mechatronics (B.Sc.) of the Hamburg University of Applied Sciences (HAW Hamburg) at the Vietnamese-German University (VGU).

2 Objectives of the degree programme

(1) The Bachelor's degree programme in Mechatronics (B.Sc.) leads to a first university degree qualifying graduates for professional practice. Graduates acquire the following skills in particular: they develop problem-solving skills for practical applications as well as practical skills in the fields of electrical engineering, mechanical engineering and related disciplines. In addition, graduates acquire comprehensive knowledge of engineering, mathematics and the natural sciences, enabling them to work scientifically and to carry out their professional activities responsibly. They are able to apply new findings from engineering and scientific research to industrial and commercial production processes, whilst taking into account microeconomic, environmental and safety requirements. They can independently deepen their specialist knowledge. In addition, they acquire key skills such as time management, learning and working techniques, the ability to cooperate, teamwork skills, leadership skills and communication skills. In particular, graduates of the programme are able to design and realise products, mechatronic systems or machines in accordance with general engineering principles, taking into account various aspects of conception, development and design. A particular focus of the programme is on understanding the interaction between mechanical, electrical and IT components.
(2) Passing the Bachelor's examination demonstrates that the programme objective described in paragraph 1 has been achieved.

§ 3 Standard duration of study, total number of credit points and structure of the degree programme

(1) The standard duration of study for full-time students is three and a half years (seven semesters).
(2) A total of 210 credit points are awarded for successful completion of the programme.
(3) The programme consists of a theoretical and application-oriented core curriculum and a specialisation phase. Students may choose different areas of specialisation by selecting from a range of compulsory-elective modules. The final three semesters of the programme are devoted to a practice-oriented specialisation. The programme concludes with the Bachelor's thesis, to be completed in the seventh semester.

§ 4 Language of instruction and examination

The language of instruction and examination is English.

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

§ 5 Academic degree

Upon successful completion of the programme, the University of Applied Sciences awards the academic degree 'Bachelor of Science (B.Sc.)'.

§ 6 Academic Advising

(1) Academic advising is a support service provided throughout the course of study. It is intended to provide information on the aims of the programme, its content and structure, study options, study techniques and learning preferences, the conduct of examinations, and the areas of professional practice. The Dean's Office of the Faculty of Aviation and Automotive Systems appoints a professor as academic advisor. The term of office is two years.

(2) Students who have exceeded the standard period of study in accordance with Section 3(1) must attend a subject-specific counselling session within two semesters of the end of the standard period of study, unless they have registered for any outstanding examinations or their Bachelor's thesis by the end of this period. Students who fail to attend the academic advisory session due to exceeding the standard period of study shall be de-registered in accordance with the provisions of the HmbHG, as amended.

(3) Students are expected to attend a subject-specific advisory session during the first semester of their Bachelor's programme.

§ 7 Modules and credit points

(1) The degree programme is structured in modules. A module is a unit of study that is defined thematically and in terms of time by the combination of intended learning outcomes and course content. A module serves to enable students to acquire competences that constitute a partial qualification towards the overall qualification objective of the degree programme. Participation in a module may be made conditional upon the successful completion of other modules.

(2) Each module is allocated credit points calculated in accordance with the European Credit Transfer and Accumulation System (ECTS). The credit points reflect the average workload required of students to successfully complete the module; this includes, in particular, attendance, preparation and follow-up work, self-study, as well as examinations and examination preparation. One credit corresponds to an average workload of 30 hours. As a rule, 60 credits are awarded for each academic year and 30 credits for each semester.

(3) Credit points are awarded only for the successful completion of modules. Students earn the credit points allocated to a module in accordance with the module table in paragraph 5 once they have successfully passed the examinations required to pass the module.

(4) The degree programme consists of the modules listed in the module table in paragraph 5 and the Bachelor's thesis, including the associated final colloquium. The respective module descriptions set out the details of the modules and are summarised in a module handbook. The module descriptions contain the information required under Section 7(2) of the Ordinance Regulating the Details of Study Programme Accreditation in the Free and Hanseatic City of Hamburg (Study Programme Accreditation Ordinance – StudakkVO), as amended from time to time. The provisions of these regulations are binding on the module handbooks. The module handbook and any amendments thereto are adopted by the Faculty Council. The module handbook, in its current version, is published on the HAW Hamburg website at .

(5) The degree programme comprises the following modules (module table):

[1] For the examination formats (PF), the standard examination format is generally specified. In addition to the standard examination format listed first, the other examination formats listed in brackets are also permitted.

BA = Bachelor's Thesis
G = Weighting
H = Term paper
K = Written examination
KGP = small-group project
KN = Design project
KO = Final colloquium
Koll = Colloquium
LP = Credit points
LVA = Course type

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

M = Oral examination
PA = Examination type
PF = Examination format
PJ = Project work
PL = Examination performance
PP = Portfolio assessment
Prak = Laboratory course
R = Presentation
S = Seminar
Sem. = Semester
SeU = Seminar-based teaching
SL = Coursework
SWS = weekly contact hours per semester
T = Certificate
Üb = Exercise

(6) Admission to the examinations for modules M3 to M5, M7 to M9, M11 to M17, M19 to M26, M30 to M41 and M44 is conditional upon having passed the relevant course unit or course units for the module in question.
(7) In the fifth semester, students undertake the 'Integration Subjects' module. This module is designed to help students acquire interdisciplinary skills and methods, as well as to explore knowledge and methods from areas situated at the boundaries or interfaces of the programme's curriculum. In terms of content, the module covers both the development of key competences (soft skills) and an in-depth examination of subject-specific topics. By choosing these subjects from the range of courses offered by the VGU and/or HAW Hamburg, students broaden their horizons in line with their own interests. The integration subjects are announced to students via notice boards or online. Students must successfully complete a total of six credit points across at least two integration subjects. Any credit points earned in excess of this will be forfeited.
(8) In the sixth semester, students must successfully complete five modules, each worth five credit points, from the range of compulsory-election modules on offer. Students have the option of selecting all modules from a single specialisation or from different specialisations. Alternatively, examination and coursework may be undertaken in up to two other, academically relevant compulsory-choice modules from the Bachelor's programme offered by HAW Hamburg or another higher education institution. In this case, an application for the recognition of the examination and coursework to be undertaken in these modules must be submitted to the Chair of the Examination Board at the start of the course. If examination and coursework have been completed in more than five modules, the student must, no later than upon submission of the Bachelor's thesis, specify five compulsory-elective modules to be included in the calculation of the overall mark. Up to three surplus modules may, upon application, be included on the transcript as additional modules; however, they will not be included in the calculation of the overall mark in accordance with Section 29. The relevant specialisation will only be listed on the transcript if at least four modules from that specialisation have been successfully completed.
(9) Successful completion of modules M1 to M12 is a prerequisite for participation in courses and admission to examinations for the third-year modules (M 25 to M 44). In justified exceptional cases, upon written application, examinations and coursework for the third year of study may be

undertaken even if proof of successful completion of the first year of study in accordance with paragraph 5 has not yet been provided, provided that at least 50 credit points from the first year of study can be demonstrated. The chair of the Examination Board shall decide on the application on the recommendation of the subject advisor.

§ 8 Practical module (industrial placement)

(1) In the seventh semester, the degree programme includes a practical module worth 15 credit points, comprising a 14-week industrial placement in a role relevant to the engineering profession and an accompanying course.

(2) The practical module may only be commenced once modules M1 to M12 of the first year of study have been successfully completed.

(3) The practical module is completed by means of an academic assignment in the form of a presentation. Students must provide evidence of the successful completion of the practical semester to the person responsible for the practical module.

§ 9 Types of courses

(1) The types of course are:

1. Seminar-based teaching (SeU)

   In seminar-based teaching, lecturers present and impart fundamental and specialist academic and/or artistic knowledge and methods with the active participation of students. It combines lectures with interactive elements, with the aim of facilitating a student-centred feedback process between learners and lecturers.

2. Seminar (S)

   A seminar is a course in which the presentation and teaching of basic and specialised academic and/or artistic knowledge and methods is supplemented by presentations or other contributions from the students themselves. It is characterised by intensive interaction between lecturers and students and the exploration of predominantly new problems using academic methods, alternating between input/teaching and learning.

3. Laboratory course (Prak)

   The laboratory course is a type of course in which students, in accordance with the instructions and under the guidance of the teaching staff, or through independent experimentation following approval by the teaching staff, carry out practical activities – either individually or in groups – to apply their theoretical knowledge and deepen their skills. In the laboratory course, students are expected to acquire practical skills from the various areas of application within their respective scientific specialisation. In doing so, they are to gain experience and proficiency in the use of subject-specific practical or technical-design methods, and to become familiar with and learn to evaluate all associated resources. The aim is to gain confidence in the application, analysis, reflection and transfer of the knowledge and skills acquired so far during their studies.

4. Exercise (Üb)

   The exercise is a type of course in which students are required to complete set tasks under the guidance of the teaching staff. It serves to supplement and consolidate the content taught in seminars using appropriate examples. Students learn to apply the knowledge and methods taught in lectures or seminars in a practical manner by working on specific tasks.

5. Small-group project (KGP)

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

The small-group project is a teaching project for a small number of students. As a rule, three to five students work together on a small-group project. In this teaching project, students independently tackle problems relevant to their future professional field from an interdisciplinary perspective, under the guidance, advice and facilitation of the teaching staff. Where possible, teaching projects should be carried out in collaboration with project partners from outside the university.

6. Colloquium (Koll)

In the seminar, students give presentations on individual topics, followed by discussions. Groups of students are encouraged to engage in critical dialogue with one another regarding their academic projects (e.g. research projects and dissertations) and to develop ideas for their future work. The discussions are structured and facilitated by lecturers.

(2) Attendance is compulsory for the following types of course:

1. Seminar (S),
2. Laboratory course (Prak) and
3. Exercise (Üb),

as regular active interaction between students and lecturers, joint reflection and the practical application of research and presentation methods are essential for achieving the learning outcomes.

(3) The attendance requirement is met if the student has attended at least 80 per cent of the weekly semester hours for the respective course as specified in the module table in accordance with Section 7(5).

(4) Courses are generally held in person. In addition, courses may be delivered with digital support using the video conferencing systems, learning management systems, learning platforms and other technical aids provided by the university.

§ 10 Enrolment and Restrictions on Attendance at Individual Courses

(1) The Dean's Office may, in consultation with the Examinations Board, establish an enrolment and allocation procedure for individual courses in order to ensure an even distribution of student numbers across courses or individual examination dates.

(2) The number of students may be limited for individual courses if this is necessary for their proper conduct. Any restriction on the number of participants in a course must specify the criteria for selecting students and must be announced in an appropriate manner in good time before the start of the registration period for course enrolment. The decision as to whether a restriction is necessary and which criteria are to be applied in selecting students is taken by the Dean's Office in consultation with the Examinations Board.

(3) Students are entitled to admission to courses if they fulfil the eligibility requirements set out in these regulations and, in the event of a restriction on the number of participants in accordance with paragraph 2, have been considered in the selection process.

(4) Appropriate consideration must be given to the special needs of students with disabilities and/or long-term or chronic illnesses, as well as students with children or students who are providing care for close relatives in need of care within the meaning of Section 7(3) of the Care Allowance Act (PflegeZG).

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

§ 11 Recognition and crediting of periods of study, academic achievements and examination results

(1) Academic and examination achievements, as well as periods of study and professional practice, completed at higher education institutions shall be recognised upon application by the student, provided there are no significant differences between the competences acquired and those to be acquired.

(2) When recognising academic achievements and examination results, as well as periods of study and professional practice, completed outside the Federal Republic of Germany, the recommendations of the Standing Conference of the Ministers of Education and Cultural Affairs and the German Rectors' Conference (in particular equivalence agreements), as well as arrangements made within the framework of university partnerships and cooperation agreements between HAW Hamburg and other higher education institutions involved in the degree programme, must be taken into account.

(3) Failed examinations in modules of a degree programme at HAW Hamburg or at other higher education institutions shall be automatically counted towards the number of examination attempts permitted for equivalent modules in the chosen degree programme. The same applies in the event of a change to the study and examination regulations whilst remaining on the same degree programme.

(4) Competences acquired by means other than through a degree programme, which are equivalent to those required and necessary for the successful completion of a degree programme at HAW Hamburg, shall, upon application by the student, be credited towards the required academic and examination requirements to a maximum of half.

(5) Where examination results are recognised, the marks shall be adopted – provided the marking systems are comparable – and included in the calculation of the overall mark. Where marking systems are not comparable, the examination result shall be recorded as 'pass'. The overall mark is then calculated without taking the recognised examination performance into account. The same applies to recognised achievements that were completed without a mark. These are recorded as 'pass' and are not taken into account when calculating the overall mark. Recognised examination and academic achievements are indicated in the degree certificates.

(6) An application for the recognition or crediting of academic and examination achievements, or periods of study and professional practice, is excluded once a legally binding registration to undertake the same academic and examination achievements, or periods of study and professional practice, has been made for the first time. A legally binding examination registration is deemed to have taken place once the deadline for withdrawing from the examination has passed.

(7) The chair of the Examination Board shall decide on recognition and credit transfer, where appropriate after consulting subject area representatives. A corresponding application by the student must be submitted in writing or electronically via the relevant office to the chair of the Examination Board. Students must provide all the necessary documentation for the assessment of recognition and credit transfer. Recognition may only be refused by the chair of the Examination Board if they can demonstrate that there are significant differences between the competences acquired and those to be acquired at the host higher education institution in accordance with paragraph 1. The crediting of competences acquired by means other than a degree programme in accordance with paragraph 4 may be refused if the student has not demonstrated that equivalence exists. Recognition and crediting subject to conditions is possible.

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

§ 12 Registration for and withdrawal from examinations

(1) Participation in an examination requires students to register for it. Registration also constitutes an application for admission to the examination. Registration for an examination becomes binding once the withdrawal deadline for that examination has passed. Students may not sit the examination if they have not registered or have not been admitted.

(2) The registration procedure and the registration and withdrawal deadlines are determined by the Examination Board, taking into account the semester schedule, and are announced in good time and in an appropriate manner. The withdrawal deadline ends no later than three calendar days before the examination date. For submission-based examinations, in particular term papers, the date on which the topic is issued is deemed to be the examination date.

(3) For examinations held throughout the semester, in particular portfolio examinations, the Examination Board may set separate registration and withdrawal deadlines.

(4) Withdrawal from a registered examination is possible within the withdrawal deadline set by the Examination Board in accordance with paragraphs 2 and 3. In the case of examinations held throughout the semester, in particular portfolio examinations, withdrawal is only permitted until the expiry of the specified withdrawal deadline.

(5) If withdrawal in accordance with paragraph 4 is no longer possible, a student may withdraw from a registered examination on the grounds of a valid reason in accordance with § 21.

§ 13 Examinations – Types and Forms of Examination

(1) The purpose of an examination is to determine whether and to what extent the candidate possesses the competences as described in the relevant module handbook for the respective module. Together with the further competences from the other modules, these competences constitute the overall qualification which the student is expected to acquire in the course of their studies in order to achieve the study objectives set out in § 2(1).

(2) Examinations are taken either as ‘examination’ or ‘coursework’ assessments. Examination results are assessed and graded. Coursework is assessed as ‘pass’ or ‘fail’. All examinations are taken as part of the course of study.

(3) Examinations and coursework are undertaken throughout the course of study in the following forms:

1. Written examination (K)

   A written examination is a supervised test in which students work independently on the set tasks, using only the permitted aids. The duration of a written examination is at least 60 and at most 240 minutes. Written examinations may be conducted in written or electronic form.

2. Term paper (H)

   A term paper is a piece of work to be completed without supervision, applying academic methods and knowledge, through which the student demonstrates their ability to work independently on a set topic or case study. The time allowed for a term paper is at least one week and at most twelve weeks. A written declaration must be submitted alongside the term paper, stating that the paper – or, in the case of group work, the appropriately marked sections of the paper – was written independently without outside assistance and that only the specified sources and resources were used.

3. Oral examination (M)

   An oral examination is an examination interview of limited duration, during which students

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

are required to answer specific questions and/or complete specific tasks. The duration of an oral examination is a minimum of 15 minutes and a maximum of 45 minutes for each candidate. Oral examinations may be conducted as individual examinations or as group examinations, usually involving up to three candidates. If an oral examination is conducted by two examiners (a panel examination), the student is to be examined in each subject by only one examiner. All examiners participate on an equal footing in determining the mark. If the examination is not conducted as a panel examination, it must be held in the presence of an observer. The observer participates in the oral examination to assist the examiner in conducting the examination, without, however, conducting the examination themselves. Section 17(5) on the duty of confidentiality applies accordingly. The main points of the examination discussion, the mark or result of the oral examination and any notable incidents must be recorded in minutes. These are signed by the examiners and the observers and remain with the examination files. For oral examinations, subject to the availability of seats, members of HAW Hamburg or the VGU, in particular students on the same degree programme, are admitted as observers. Students who intend to sit the same examination during the current examination period shall be excluded from attending as observers. Admission as an observer does not extend to participation in the deliberations on the examination results. At the request of the candidates, the public shall be excluded.

4. Presentation (R)

A presentation consists of a written and an oral part. In the written part, the most important findings must be summarised, citing the sources used; in the oral part, they must be presented freely, in a structured manner, tailored to the audience and in front of a group, based on the research work and using the permitted aids, and defended in a subsequent discussion. The oral presentation lasts at least 15 and no more than 45 minutes per candidate. The presentation may be conducted individually or as a group examination. The preparation time for the presentation is a maximum of 6 weeks.

5. „Testat“ (T)

A „Testat“ is awarded if students have successfully completed the experimental, theoretical or practical tasks set by the examiner within the semester and have demonstrated their knowledge through laboratory reports and/or written solutions to assignments and/or oral presentations. Written assignments must be submitted by a deadline set by the examiner. This deadline ends no later than the end of the relevant semester in which the assigned course takes place.

6. Project Work (PJ)

A project is an interdisciplinary task to be undertaken within the relevant professional field of the degree programme. A project must be completed within a maximum of 6 months. The work is carried out alongside the course under the supervision of the teaching staff. Students must present the results of the project. The presentation must last at least 15 and no more than 45 minutes. The presentation is followed by a discussion moderated by the examiner(s). The presentation used during the talk, as well as any preparatory and supporting documents, must be submitted to the examiner(s) in written and/or electronic form.

7. Design Project (KN)

A design project is a written assignment in which the student must demonstrate their design skills through practical tasks relevant to the subject. The time allowed for completion is a maximum of three months.

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

8. Portfolio assessment (PP)

The portfolio assessment comprises a combination of the assessment formats set out in paragraph 4, points 1–7, as well as learning tasks undertaken throughout the semester. In the portfolio assessment, students complete assessment elements at various points in time within the framework of a module. The purpose of this assessment is to demonstrate the extent to which the knowledge and competences required for the module have been acquired. The portfolio assessment comprises a minimum of two and a maximum of 10 assessment components. At least two different forms of assessment must be used for the portfolio assessment. The overall scope of the portfolio assessment, in terms of workload and academic difficulty, must not exceed the scope of a single form of assessment as set out in paragraph 3, points 1 to 7. At the start of the course, the examiners shall determine the forms of assessment to be used, the dates on which the individual assessment components are to take place, their scope, and the weighting to be applied to each component for the portfolio assessment. The individual assessment components contribute to an overall mark for the respective portfolio assessment in accordance with their weighting. In the event of a fail, the portfolio assessment must be retaken in its entirety. If an assessment element is not successfully completed for a valid reason in accordance with § 21, it may be retaken either during the current assessment period or in the following or subsequent semester, depending on when the examiner offers this opportunity. If the resit takes place in a subsequent semester, the examination components that have already been completed may remain valid.

(4) Examinations may be conducted wholly or partly in electronic form (Section 14: Electronic In-Person Examinations).

(5) Examinations may be conducted via a remote electronic data network (Section 15: Online Examinations). Written examinations may not be conducted as online examinations via a remote electronic data network.

(6) When sitting an examination that requires physical attendance, students must, upon request, prove their identity by presenting an official photo ID. In the case of online examinations in accordance with Section 15, authentication must be carried out in compliance with data protection regulations.

(7) If alternative examination formats in accordance with paragraph 3 are provided for a module in the module table pursuant to Section 7(5), the respective examination format, the formal examination conditions, in particular the duration and the permitted aids, shall be announced by the examiners no later than the start of the respective course.

(8) Where, in cases of force majeure, it is not possible to complete coursework and examinations in the form of examination provided for in these Regulations, alternative forms of examination from paragraph 3 may be selected, provided that, in the examiner's judgement, these are suitable for assessing the relevant learning outcome. Where, in cases of force majeure, students are unable to submit written assignments or the Bachelor's thesis (§ 16) by the deadline, the Examination Board may decide on appropriate measures, in particular the extension of the time allowed for completion and the adjustment of the submission arrangements; the extension of the completion period at the student's request for good cause in accordance with Section 16(7) remains unaffected.

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

§ 14 Electronic in-person examinations

(1) Examinations pursuant to Section 13(3)(1) (written examination), Section 13(3)(7) (design project) and examination components of a portfolio assessment pursuant to Section 13(3)(8) may be conducted as supervised electronic in-person examinations on the university's premises. The tasks shall be completed on devices provided by the university.

(2) It must be ensured that the electronic data can be unambiguously and permanently attributed to individual students.

(3) An electronic in-person examination in the form of a written examination may be (partially) marked electronically or automatically. The examiner's responsibility for assessing the work remains unaffected.

(4) Before registering for the examination, students must be informed in an appropriate manner that the examination will be conducted as an electronic examination. Students should be given sufficient opportunity to test the conditions of the electronic examination in advance with regard to technology, equipment and the physical environment. Before the registration deadline, students must be informed about the processing of personal data.

(5) The smooth running of the examination must be ensured through appropriate technical and specialist support. If it can be demonstrated that the transmission of the examination paper, the completion of the examination paper and/or the transmission of the completed answers is not feasible at the time of the examination, the examination shall be terminated and the course or examination performance shall not be assessed. The examination attempt shall be deemed not to have taken place. This shall not apply if it can be proven that the student is responsible for the disruption. In the event of technical faults that can be rectified whilst the examination is in progress – for example, by using a replacement device – the affected students shall be granted the time lost due to the disruption at the end of the examination.

(6) The conduct of the examination, in particular the nature, duration and timing of any technical faults, must be recorded in the examination report.

§ 15 Online examinations

(1) The oral examination referred to in Section 13(3)(3), the presentation referred to in Section 13(3)(4) or components of portfolio-based examinations of an oral nature may be conducted via an electronic data network using a video and audio connection (video conference/video call). Written examinations may not be conducted online.

(2) Only the electronic systems provided by the university may be used. Group examinations may only take place as video conferences for all candidates; hybrid examinations are not permitted with regard to the candidates. Examiners and assessors may be connected to in-person examinations. Observers may also be connected to video conferences, provided they would be permitted to attend in-person examinations.

(3) Participation in an online examination with video supervision is voluntary, and students must consent to the online examination being held. This does not apply to online examinations held on the university's premises using only the university's own technical equipment. Voluntary participation is ensured by offering, as an alternative, an in-person examination using only the university's own technical equipment, unless all students registered for the examination have consented to the online examination being held.

(4) Before registering for the examination, students must be informed in an appropriate manner that the examination will be conducted online. Students should be given sufficient opportunity to

test the conditions for the online examination in advance, in terms of technology, equipment and physical environment. Before the deadline for registering for the examination, students must be informed about the processing of personal data, the technical requirements for the electronic systems and the internet connection, the organisational conditions of the online examination and the voluntary nature of participation in the online examination in accordance with paragraph 3.
(5) During online examinations, students must keep their camera and microphone switched on for the entire duration of the examination.
(6) Recording the examination or otherwise storing the video or audio data is not permitted. The storage of data processed in connection with authentication, beyond what is technically necessary for temporary storage, is not permitted. Personal data from temporary storage must be deleted immediately.
(7) If there is verifiable evidence that the video or audio transmission during an online examination via video conference is temporarily disrupted, the examination shall be suspended for the duration of the disruption and resumed once the disruption has ended. If the technical disruption persists to such an extent that, in the opinion of the examiner or examiners, the examination cannot be properly continued, the examination shall be terminated and the academic or examination performance shall not be assessed. The examination attempt shall be deemed not to have taken place. This shall not apply if it can be proven that the student is responsible for the disruption. The nature, duration and time of the technical disruption must be recorded in the examination report.

§ 16 Bachelor's Thesis

(1) In the Bachelor's thesis, students are expected to demonstrate that they are able, within a specified timeframe, to work independently on a task from the professional field corresponding to their degree programme, applying academic methods and findings. The Bachelor's thesis is a written piece of work. In addition to the written Bachelor's thesis, a final colloquium is a compulsory component of module M46 'Bachelor's Thesis with Final Colloquium'. The final colloquium consists of an oral presentation followed by a discussion of the contents of the Bachelor's thesis. It must take place no later than ten weeks after the submission of the written Bachelor's thesis.
(2) Students must apply for admission to the Bachelor's thesis in writing or electronically. The application must be addressed to the chair of the examination board. Admission to the Bachelor's thesis may be applied for once at least 180 credit points have been earned.
(3) The Bachelor's thesis must be written in English. Exceptions to this rule may be requested via the chair of the examination board.
(4) The final thesis is assessed by two examiners (first and second examiners). The first examiner is responsible for supervising the final thesis. First examiners may only be university lecturers at HAW Hamburg or the VGU who are authorised to conduct examinations in accordance with Section 64 of the Hamburg Higher Education Act (HmbHG). Second examiners may be any person authorised to conduct examinations in accordance with Section 64 of the Hamburg Higher Education Act (HmbHG).
(5) When applying for admission, students may propose a topic and examiners (first and second examiners). These proposals shall be accommodated as far as possible and reasonable. If a student has made unsuccessful efforts to find examiners and/or a topic for their Bachelor's thesis, the chair of the Examination Board shall, upon request, arrange for examiners and ensure that the student is allocated a topic. The topic of the Bachelor's thesis must be limited in such a way that the workload involved corresponds to twelve credit points and can be completed within the twelve-

week deadline. The topic of the Bachelor's thesis is confirmed upon its allocation by the chair of the examination board. The topic, the date of allocation, the end of the completion period and the examiners must be recorded in the official records. Upon allocation, the first and second examiners are appointed in accordance with paragraph 4.
(6) The Bachelor's thesis must be submitted in writing, in a single copy, to the relevant office by the deadline. In addition, the Bachelor's thesis must be submitted in electronic form. The student must certify that the electronic version submitted corresponds to the written copy. The date of submission must be recorded. The chair of the examination board may specify the electronic format of the Bachelor's thesis and the method of transmission in more detail. A written declaration must be submitted together with the Bachelor's thesis, in which the student affirms on oath that the thesis was written independently without external assistance and that only the sources and resources cited were used.
(7) Upon application by the student submitted before the deadline expires, the chair of the examination board may, where there is good cause, extend the completion period by a maximum of six weeks. The reason given must be notified to the chair of the examination board without delay, in writing or electronically, and must be substantiated. In the event of illness, a valid medical certificate must be submitted without delay. This must contain, at a minimum, details of the physical or mental impairment resulting from the illness, the effects of the illness on the student's ability to sit the examination from a medical perspective, the date of the medical examination on which the certificate is based, and the doctor's prognosis regarding the duration of the illness. The decision on the application is taken by the chair of the examination board.
(8) Each examiner shall carry out an individual assessment and award a mark, which must be justified. The Bachelor's thesis shall be marked without delay, and at the latest within eight weeks of its submission. In the event of an unusually high number of examination procedures or for comparable objective reasons, the chair of the examination board may grant a longer assessment period.
(9) The mark for the Bachelor's thesis is calculated as the arithmetic mean of the marks awarded by the two examiners in accordance with Section 19(5). Twelve credit points are awarded for the written component of module M46 'Bachelor's Thesis with Final Colloquium' and three credit points for the subsequent final colloquium. Each examiner incorporates the mark for the colloquium into their mark for module M46 'Bachelor's Thesis with Final Colloquium', weighted at 3/15.
(10) If the Bachelor's thesis with the final colloquium is graded 'unsatisfactory' (5.0) in the overall assessment, it may be retaken once in accordance with Section 20(4). Only in justified exceptional cases may the Examination Board grant a second opportunity to retake the module. The resit must be undertaken with a new topic. The new topic for the thesis shall be issued within a reasonable period, usually within three months of the assessment of the thesis marked 'unsatisfactory' (5.0).

§ 17 Examination Board

(1) An Examination Board shall be established to organise the examinations and to carry out the tasks assigned to it in these Examination and Study Regulations. It shall consist of five members with voting rights: three members from the group of professors, one member from the group of academic staff and one student member. A deputy member shall be appointed for each member.
(2) The members of the Examination Board and their deputy members shall be appointed by the Dean's Office of the Faculty of Aeronautics and Vehicle Systems. The term of office of the student member and their deputy member shall be one year; that of the other members and their deputy

members shall be two years. The Examination Board shall elect a chairperson and a deputy chairperson from among its members. Both must belong to the group of professors. If a member or their deputy steps down before the end of their term, a successor shall be appointed for the remainder of the term.
(3) The Examination Board shall ensure that the regulations governing examinations are observed and that examinations are conducted in accordance with the rules. By organising the examination programme appropriately, the Examination Board shall ensure that the prescribed examinations can be taken within the standard period of study.
(4) Members of the Examination Board have the right to attend the examinations.
(5) The members and deputy members of the Examination Board are bound to maintain confidentiality regarding all proceedings and deliberations relating to the examination of individual students. Unless they are employed in the civil service, they must be bound to maintain confidentiality by the chair or the deputy chair.
(6) The Examination Board meets in camera. The Examination Board has a quorum if at least three members are present, including the chair or the deputy chair and one further member from the group of professors. In the event of a tie, the chair has the casting vote. The decisions of the Examination Board must be recorded in the minutes.
(7) The Examination Board shall determine the registration procedure and the registration and withdrawal periods for sitting examinations, taking into account the relevant semester schedule.
(8) Decisions of the Examination Board, in particular the setting of registration and withdrawal periods and deadlines as well as examination dates, must be announced in a suitable manner in good time.
(9) Adverse decisions by the Examination Board or by the chair of the Examination Board must be communicated to the student without delay in writing or electronically, stating the reasons and the legal basis. The decision must be accompanied by information on the right of appeal.

§ 18 Examiners

(1) Examiners shall be appointed by the chair of the Examination Board in accordance with the provisions of the HmbHG, as amended.
(2) Members of staff from other higher education institutions, as well as researchers from non-university research institutions, members of artistic institutions, outstanding freelance artists, or persons with experience in professional practice and training may also be appointed as examiners, provided they hold at least the qualification to be assessed by the examination or an equivalent qualification. They should possess knowledge of examination methodology and have participated in an appropriate manner in teaching activities or in the supervision of examination candidates.
(3) As a general rule, lecturers who are responsible for delivering the courses assigned to a module shall be appointed as examiners for module examinations. The chair of the Examination Board shall decide on any exceptions. If several examiners are involved in a student's examination, they shall form an examination board.
(4) Examiners are not bound by any instructions when assessing examination and academic performance. Section 17(5) on the duty of confidentiality applies mutatis mutandis.

§ 19 Assessment and Grading of Academic and Examination Performance

(1) Only the individual achievements of each student shall be assessed. In the case of group work, the contributions of individual students may only be recognised as an independent examination

or academic achievement of a single student to the extent that the individual achievement to be assessed is clearly distinguishable and assessable. The completion of the Bachelor's thesis in accordance with § 16 in the form of group work is excluded.
(2) The assessment or marking of individual coursework and examination performance shall be carried out by the relevant examiner or examiners.
(3) Examination and coursework achievements shall be assessed or marked without delay, and at the latest within eight weeks. In the event of an unusually high number of examination procedures or for comparable objective reasons, the chair of the examination board may grant a longer assessment period. Section 16(8) applies to the Bachelor's thesis.
(4) A successfully completed course module is assessed as 'pass', whilst one not successfully completed is assessed as 'fail'; however, no mark is awarded. Course modules are therefore not included in the calculation of the overall mark in accordance with Section 29.
(5) The following grades shall be used for the assessment of examination results:
1.0 = very good (an outstanding performance)
2.0 = good (a performance that is significantly above average),
3.0 = satisfactory (a performance that meets average requirements),
4.0 = pass (a performance which, despite its shortcomings, still meets the requirements),
5.0 = unsatisfactory (a performance which, due to significant shortcomings, no longer meets the requirements).
To allow for a more nuanced assessment, marks between 1.0 and 4.0 may be reduced or increased by 0.3. Marks of 0.7, 4.3, 4.7 and 5.3 are not permitted. An examination is passed if it has been awarded a mark of at least 4.0.
(6) A module is passed if each of the examination components assigned to it has been awarded a mark of at least 4.0 and/or each of the course components assigned to it, where applicable, has been passed. The mark for a module corresponds to the mark of the examination component assigned to it. Where there are several examination components, the module mark is calculated as the arithmetic mean of the individual examination components. The calculated mean is adjusted to the marks set out in paragraph 5; it is rounded up or down to the mark with the smallest difference from the calculated mean. If the difference is equal for two marks set out in paragraph 5, the module mark is to be rounded up to the next higher mark.

§ 20 Retaking Examinations

(1) Passed examinations or coursework, or a passed Bachelor's thesis including the associated final colloquium, may not be retaken.
(2) Any examination or course component that has not been passed may be retaken three times, giving a total of four attempts. If all opportunities to retake the examination or course component have been exhausted without success, the examination or course component in question is deemed to have been definitively failed.
(3) At least one examination opportunity is offered for each examination or course module during the current semester. It must be ensured that, as a rule, each examination or course module can be retaken by the end of the following academic year at the latest. Students should take the next available examination date.
(4) A failed Bachelor's thesis, including the associated final colloquium, may be retaken only once. In justified exceptional cases, a second retake is possible. For a justified exceptional case to apply, the reasons must be beyond the student's control. The decision is taken by the chair of the

examination board. If all opportunities to retake the examination have been exhausted without success, the Bachelor's thesis is deemed to have been failed definitively.
(5) If a compulsory elective module is changed, examination attempts undertaken in other compulsory elective modules shall not be counted towards the number of examination attempts for the chosen compulsory elective module.

§ 21 Absence and Withdrawal

(1) If, after registering for an examination, a student misses an examination date without good cause, withdraws from an examination once it has begun, or fails to complete an examination or academic task within the stipulated—or, where applicable, extended—time limit, the examination result shall be graded as 'unsatisfactory' (5.0) or the academic task as 'failed'.
(2) The reason given for the absence or withdrawal must be notified to the chair of the examination board via the relevant office without delay, in writing or electronically, and must be substantiated. In the event of illness, a valid medical certificate must be submitted. This must contain, at a minimum, details of the physical and/or psychological impairment resulting from the illness, its impact on the student's ability to sit the examination from a medical perspective, the date of the medical examination on which the certificate is based, and the doctor's prognosis regarding the duration of the illness. The illness of a child, the unavoidable loss of childcare for a child or a close relative in need of care, or the sudden emergence of a need for care for a close relative are recognised as valid reasons. Where evidence is submitted in copy or electronic form, the original may be requested within a specified deadline without giving reasons. If the student fails to comply with this request within the specified deadline, the evidence of a valid reason shall be deemed not to have been provided.
(3) If the reason given for the absence or withdrawal is accepted, the examination attempt shall be deemed not to have taken place. Favourable decisions shall be announced via the campus management system with online access. Students shall be notified of this in an appropriate manner. For unfavourable decisions, § 17(9) shall apply.

§ 22 Cheating and breaches of order

(1) If a student attempts to influence the result of their examination by means of deception, in particular by using unauthorised aids, the relevant course unit shall be assessed as 'failed' or the examination performance shall be graded as 'unsatisfactory' (5.0). The relevant examiner or the person responsible for invigilation shall draw up a report on the incident, which shall be submitted to the Examination Board without delay. The student shall not be excluded from continuing the examination unless a breach of order as referred to in paragraph 2 has occurred. The student must be given the opportunity to comment before a decision is made. The decision as to whether an attempt at cheating has taken place shall be made by the Examination Board; this shall also apply if the student admits to the allegation of cheating.
(2) A student who disrupts the proper conduct of an examination may be excluded from continuing the examination by the examiner or the invigilator if they continue the disruptive behaviour despite a warning. The relevant examiner or the person responsible for invigilation shall draw up a report on the incident, which shall be submitted to the Examination Board without delay. The Examination Board shall decide whether a breach of order has occurred. The student must be given the opportunity to comment before the decision is made. If the Examination Board finds that a breach of order justifying exclusion has occurred, the relevant course module shall be marked 'fail' or the

examination performance shall be graded 'unsatisfactory' (5.0). If the Examination Board does not find that a breach of order justifying exclusion has occurred, the examination attempt shall be deemed not to have taken place.
(3) Favourable decisions pursuant to paragraphs 1 and 2 shall be announced in an appropriate manner. For unfavourable decisions, § 17(9) shall apply.

§ 23 Compensation for Disadvantages

(1) If a student is unable, for the reasons set out in paragraph 2, to sit examinations in whole or in part on the scheduled date, within the scheduled duration or time limit, at the scheduled venue, in the scheduled form or otherwise in the scheduled manner, the Examination Board may, upon written or electronic application by the student, grant appropriate measures to compensate for disadvantages. The application must be submitted to the Examination Board via the relevant office by the start of the registration period for the respective examination date at the latest. Measures to compensate for disadvantages serve exclusively to offset existing disadvantages. The performance requirements or the marking of the examinations remain unaffected. The nature, scope and duration of the compensation for disadvantages are determined on a case-by-case basis. Such measures may be granted for one or more semesters.
(2) Compensatory measures are available in cases of disability, long-term or chronic illness, parental leave under the Act on Parental Allowance and Parental Leave (Federal Parental Allowance and Parental Leave Act – BEEG), care leave under the Act on Care Leave (Care Leave Act – PflegeZG), pregnancy and breastfeeding, or when caring for close relatives within the meaning of Section 7(3) of the Care Leave Act (PflegeZG).
(3) The student must set out and substantiate the reasons for the requested adjustments. Appropriate evidence must be submitted to substantiate the claim. If an adjustment is requested for several semesters, the evidence must provide information on the expected duration of the impairment.
(4) In cases of disability or long-term or chronic illness, the Representative for People with Disabilities must be consulted in accordance with Section 88(3) of the Hamburg Municipal Government Act (HmbHG).

Section 24 Pregnancy and statutory maternity protection

(1) The Act on the Protection of Mothers at Work, in Training and in Higher Education (Maternity Protection Act – MuSchG), as amended, applies to pregnant and breastfeeding students.
(2) Pregnant students should notify the relevant department in writing or electronically of their pregnancy and the expected date of delivery as soon as they become aware of the pregnancy. Appropriate supporting documentation must be provided to substantiate this. Students who are breastfeeding should notify the relevant authority in writing or electronically as early as possible that they are breastfeeding. Once this information has been received, a specific risk assessment must be carried out without delay and the necessary protective measures must be determined. The student must be informed of the outcome of the specific assessment.

§ 25 Access to examination records

Students have the right, upon application to the chair of the examination board, to inspect their examination files, in particular the marked written examination papers and the related examination records or reports, provided these have not already been handed over.

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

§ 26 Appeals procedure

Appeals in examination matters must be lodged with the chair of the Examination Board within one month, provided that information on the right of appeal has been provided; otherwise, within one year of notification. If the Examination Board does not uphold the appeal, or does not uphold it in full, it must be referred to the Appeals Committee of HAW Hamburg.

§ 27 Final failure

(1) If all opportunities to retake an examination in accordance with § 20 have been exhausted without success, the examination is deemed to have been definitively failed.

(2) If an examination for a compulsory module or the Bachelor's thesis, including the associated final colloquium, has been definitively failed, the Bachelor's examination is also definitively failed and the student may not continue their studies in the relevant degree programme. The same applies if all options within the range of compulsory-elective modules have been exhausted and all opportunities to retake the examinations have been failed in each case.

§ 28 Passing the Bachelor's examination

The Bachelor's examination is passed if the examinations provided for in § 7(5), the practical module and the Bachelor's thesis, including the associated final colloquium, have been successfully completed.

§ 29 Overall mark for the Bachelor's examination

(1) An overall mark is calculated for the passed Bachelor's examination. The overall mark is derived from two component marks. One component mark is calculated from the module marks weighted in accordance with the weighting factors (column 5 of the module table in § 7(5)). This component mark accounts for 80 per cent of the overall mark. The other component mark is the mark for the Bachelor's thesis, which accounts for 20 per cent of the overall mark. The calculated overall mark is truncated to the second decimal place without rounding. Modules without a mark are not included in the calculation of the overall mark.

(2) The overall mark for the passed Bachelor's examination, calculated in accordance with paragraph 1, is:

Up to and including	1.50	very good,
above	1.50 up to and including 2.50	good,
over	2.50 up to and including 3.50	satisfactory,
over	3.50 up to and including 4.00	pass.

(3) In addition to the overall mark, a mark distribution scale is drawn up for graduates of each degree programme in accordance with the provisions of the ECTS Guidelines, as amended, and is set out in the Diploma Supplement.

§ 30 Certificate, Award of the Academic Degree, Diploma Supplement

(1) Upon passing the Bachelor's examination, a certificate confirming the award of the academic degree and a transcript of records shall be issued without delay, and at the latest within four weeks of the successful completion of the final module. The transcript of records and the certificate shall be issued in German. An English translation shall be attached to the certificate and the transcript of records.

This document is an automatic translation of the German original. It is provided for convenience only and has no legal effect. In the event of any discrepancy, the German original prevails.

(2) The academic transcript shall contain the name of the degree programme, the name of the specialisation (where this has been successfully completed), the names of the modules completed, the module marks and the corresponding credit points, the topic and mark of the Bachelor's thesis and the corresponding credit points, the overall mark and a note on how the overall mark was calculated, as well as the total number of credit points achieved. The certificate is signed by the chair of the Examination Board. The certificate bears the date on which the final academic or examination requirement was fulfilled. The diploma is signed by the Dean and bears the date of the certificate.
(3) Together with the certificate and the diploma, a Diploma Supplement in accordance with the guidelines of the ECTS, as amended from time to time, and a Transcript of Records in English shall be issued.
(4) Anyone who has definitively failed the Bachelor's examination shall receive written notification of this, accompanied by information on the right of appeal.

§ 31 Invalidity of the examination

(1) If a student has cheated in an examination required for the successful completion of the degree programme and this fact only comes to light after the degree certificate has been issued, the Examination Board may retrospectively grade the examination or coursework in question as 'unsatisfactory' (5.0) or as 'failed', adjust the other marks affected accordingly, and declare the degree programme to have been completed unsuccessfully, either in whole or in part.
(2) If the requirements for the award of the certificate were not met, without the student having intended to mislead in this regard, and this fact only comes to light after the certificate has been issued, this deficiency shall be remedied by the student passing the relevant examination.
(3) The incorrect certificate, the Diploma Supplement and the certificate conferring the Bachelor's degree shall be withdrawn. A decision pursuant to paragraphs 1 and 2 shall be precluded after a period of five years, commencing on the date of de-registration.

§ 32 Entry into force

These Examination and Study Regulations for the Bachelor's degree programme in Mechatronics (B.Sc.) at the Hamburg University of Applied Sciences at the Vietnamese-German University (VGU) shall come into force one day after their publication in the University Gazette of the Hamburg University of Applied Sciences.

Hamburg, 17 September 2026
